## Question 1:

*Main reason for taking this course.* **Answer:**

I took this course since the syllabus topics were very interesting to me. I'm an undergrad student so I'm taking it try and learn more about the topic since I'd like to have a career in computer architecture and want to learn more about how to make computing systems, well, resilient and robust so that they can last against inevitable failures.

---

## Question 2:

*Your expectation regarding this course.* **Answer:**

I honestly dont have many expectations on this course other than what is listed in the syllabus, since this is my second grad course I've taken. I'd preferably like to learn on the architecture side on how specific techniques are implemented alongside possibly assignments/references on implementing them if that is feasible.
